### Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

### Listing of Claims

1-12. (cancelled)

13. (previously presented) A rapid-exchange catheter, comprising:

an inner tubular member, having a proximal end, a distal end, and a guide wire lumen extending from a proximal guide wire opening disposed distal of the proximal end of the inner tubular member to a distal guide wire opening disposed at the distal end of the inner tubular member;

an guide wire sleeve disposed about at least a portion of the inner tubular member, having a proximal end, a distal end, and a guide wire opening disposed within the guide wire sleeve the guide wire opening distal of the proximal end of the guide wire sleeve, wherein the guide wire opening within the guide wire sleeve further comprises a guide wire ramp extending into the proximal guide wire opening of the inner tubular member.

14. (previously presented) The rapid-exchange catheter of claim 13, wherein the guide wire ramp is an integral extension of the guide wire sleeve.

15. (previously presented) The rapid-exchange catheter of claim 13, wherein the guide wire sleeve is a unitary construction.

16. (previously presented) The rapid-exchange catheter of claim 13, wherein the guide wire sleeve and guide wire ramp is a unitary construction.

17. (cancelled)

18. (previously presented) The rapid-exchange catheter of claim 13, wherein at least a portion of the inner tubular member is slidably disposed within at least a portion of the guide wire sleeve.

Appl. No. 10/785,350

Amdt. dated December 9, 2004

Reply to Office Action of September 9, 2004

19. (previously presented) The rapid-exchange catheter of claim 18, wherein the proximal guide wire opening of the inner tubular member has a length, wherein the guide wire ramp is translated along the length of the proximal guide wire opening of the inner tubular member during translation of the guide wire sleeve relative to the inner tubular member from a first position to a second position.

20. (previously presented) The rapid-exchange catheter of claim 13, wherein the proximal guide wire opening of the inner tubular member is larger than the guide wire opening of the guide wire sleeve.
